**Assignment Report**
Assignment 2
Emil Joshy

**1. The system**
This persona is for one part of the procedures for an incoming exchange student: booking a room in USI Home. Applicants cannot see how many rooms are left, whether their form arrived, or where they stand. Some apply as soon as their exchange is confirmed and only hear, weeks later, that the house is full.

**2. Broad User Characteristics**
The user class is visiting students who need a room for about one semester. Four candidates (Alice, Bob, Charlie, David) covered the housing notes.

**2.1 The early applicant who is refused**
Alice applied as soon as her exchange was approved. She could not tell whether the online form had been sent. The reply was unclear, and weeks later the house was full. She then found a private room on the USI site. Another interviewee also applied more than a month before the deadline and was told the rooms were full. The university later emailed him about people moving out.

**2.2 The applicant who waits in the dark and gets the room**
Bob found the form easy, then waited since spring with no message that it had been received. He got a place, but he had looked at nothing else. He said a receipt would have been enough, and that a first-come queue should show his place in line.

**2.3 The student the current process already serves**
Charlie applied very early, knew there were about 32 rooms, and got one quickly. Another interviewee picked up the forms on arrival and did not treat housing as a problem.

**2.4 The private-market student**
David never used USI Home. He found a room through an ESN WhatsApp group, then struggled with an agency that wanted criminal-record papers and a payment he could not make without a Swiss account.

**3. The Process**
The private-market candidate was set aside. The remaining 3 user characteristics were converted to the worst-case scenario, and then the persona was based on that.

**4. The design persona**
Emma is 22. She studies in Italy and is coming to USI for one semester. This is her first time living away from home. Her parents pay the rent and want to see the contract before she signs. She wants USI

Home because other exchange students live there and the rooms are near campus. The contract has to cover the months she is actually here.

The day her home university confirms the exchange, she sends the USI Home form. The page does not say that it arrived. She does not start a backup search, because she still thinks the room is possible. Weeks later, she is told the house is full. She does not know whether she was late, whether the form failed, or whether rooms were already gone on the day she applied.

Her goals are to see whether a room is still open before she applies, to get a clear receipt when she does, and to hear a refusal in time to use the university's own list of private rooms. She is comfortable with ordinary websites. She is not asking for a smarter form. She is asking to see the state of a list that is currently hidden.
